Weak or dead batteries should be replaced immediately and all 4 batteries should be changed. To replace the batteries please follow the instructions in the SETUP section. Remember to always remove batteries from safe if not using for an extended period of time. If your batteries are completely dead and you cannot open the safe by using the digital keypad, use the override access key to open safe and access the battery compartment.

If the batteries are removed or fail, the keypad memory will NOT be erased and the active programmed code will still work once power has been restored.

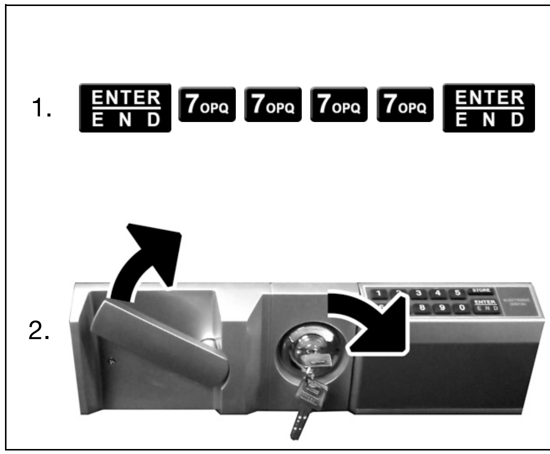

## STEP 2: UNLOCK AND OPEN THE SAFE

Your safe includes 2 Entry keys and 1 Emergency Access key,.

**1.** On the keypad, press "ENTER" then "7 7 7 7" then "ENTER" again. If the correct code has been entered, a musical code will chime and the lock will click open.

**2.** Insert the "Entry Key" and turn all the way to the right (clockwise). Rotate the handle upwards and pull the door open.

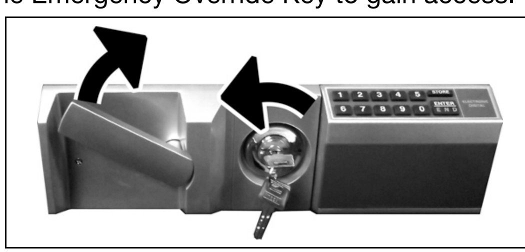

## TO LOCK THE SAFE:

Carefully close the door and rotate the handle downwards. Now turn the key all the way to the left and remove from the safe. The safe is now in locked position. The Entry key and security code will be needed to open.

## OVERRIDE ACCESS KEY

If you have forgotten your personal access code or the electronic lock is not functioning properly, you can use the Emergency Override Key to gain access.

Insert the Emergency Access key into the lock, turn all the way to the left (counterclockwise), and lift handle to open safe.

## STEP 3: PROGRAM NEW USER CODES

**1.** With the door open, press the small black button located near the inside center of the door.

**2.** You will hear a musical chime and the small green LED will glow. NOTE: If the green LED stops glowing, you need to press the black button and start again.

**3.** Using the digital keypad, you now have approximately 5 seconds to begin entering a new personal code using a minimum of 4 digits to a maximum of 16 digits.

**4.** Once you have entered new code, press ENTER key. You will hear a chime indicating new code is now programmed into memory.

Before closing and locking the safe door, you should enter your new code to confirm that it is correct and unlocks the safe.
